General Electric IS230SNAIH2A

COMPLETE PRODUCT INFORMATION / EXACT-MODEL ENGINEERING FILE

General Electric IS230SNAIH2A is a simplex analog i/o module for the GE Mark VIe control platform. The complete marking and installed hardware arrangement must be matched before replacement.

01 Product overview

Hardware mapping	Redundancy	Installation format
IS230SNAIH2A combines 1 PAIC I/O pack with terminal board IS200STAIH2A.	Simplex execution for the analog i/o path.	DIN-rail Mark VIe module; match the complete IS230SNAIH2A catalog number.

GE lists IS230SNAIH2A as a analog i/o module in the Mark VIe I/O catalog mapping. Its documented hardware boundary is 1 PAIC I/O pack with terminal board IS200STAIH2A, using a simplex arrangement on a DIN rail.

The associated component reference is IS230STAIH2A. That mapping is useful for identity review, but the offered item remains IS230SNAIH2A; the catalog numbers must not be shortened or interchanged when the installed module is approved.

Verified technical data

Catalog number	IS230SNAIH2A
Product type	Simplex Analog I/O Module
Control platform	GE Mark VIe
GE notice mapping	No-price-impact catalog number corresponding to IS230STAIH2A
I/O pack redundancy	Simplex

Engineering record prompts

Nameplate record	Capture the complete marking, visible revision and installed position before removal.
Connector record	Photograph every used connector, cable label, keying feature and shield termination.
Host record	Identify the carrier, rack, drive, chassis or operator station that owns the installed position.

02 Technical data and installed-system relationship

I/O pack family	PAIC
I/O pack quantity	1
Included terminal board	IS200STAIH2A
Functional description	Analog I/O
Mounting	DIN-rail mount

Engineering interpretation

Complete identity	Use IS230SNAIH2A as one complete reference in the quotation, service record and acceptance file.
Installed position	Record the exact host position and functional ownership within the GE Mark VIe control platform.
Physical execution	Compare artwork, connectors, keying, terminal hardware and orientation with the removed assembly.
Configuration boundary	Preserve the applicable project, address, firmware or hardware-setting record before removal.
Acceptance evidence	Retain initial and as-left diagnostics plus the controlled functional-test result.
Unstated values	Do not assign electrical or compatibility values that are not established by the exact-model evidence.

Controller platform reference

GE Mark VIe control platform. Use the exact installed hardware execution and the approved system record.

Engineering record prompts

Host record	Identify the carrier, rack, drive, chassis or operator station that owns the installed position.
Configuration record	Archive the applicable project, address, parameter, firmware or hardware-setting evidence.

03 Applications / Compatibility

System position: IS230SNAIH2A is evaluated within the documented GE Mark VIe control platform architecture. Compatibility boundary: Match the complete IS230SNAIH2A marking, mating hardware and installed configuration before replacement.

Mark VIe I/O replacement
Replace the documented DIN-rail module only after matching the complete catalog number and terminal-board execution.

Planned outage maintenance
Capture the installed I/O mapping, pack positions and field wiring before disturbing the assembly.

Controlled commissioning
Restore the approved Mark VIe configuration and prove the exact input, output or protection path.

Spare qualification
Retain catalog number, redundancy, included terminal board and I/O-pack quantity with the spare record.

Product Precautions

Verify the complete catalog number
Check every letter and number against the offered label and the approved Mark VIe hardware record.

Isolate field and control power
Apply the site procedure before touching terminal-board wiring, I/O packs or DIN-rail hardware.

Record pack and board positions
Photograph IONet ports, pack positions, terminal wiring, shields and connector orientation before removal.

Preserve configuration evidence
Archive the controller database, diagnostics and I/O mapping that identify the installed signal path.

Inspect mating hardware
Check terminal-board connectors, I/O-pack seating, field terminals and Ethernet cabling before replacing the assembly.

Prove the exact function
Use an approved signal or protection test and retain as-left diagnostics with the maintenance record.

Additional verified data

Mark VIe I/O-pack Ethernet ports	2 per I/O pack; platform architecture
IONet link	100 MB full-duplex point-to-point; platform architecture
I/O-pack internal elements	Power supply, local processor and data-acquisition board; platform architecture

04 Technical FAQ

How should IS230SNAIH2A be identified before replacement?	Match the full IS230SNAIH2A label, the simplex execution, PAIC pack count and IS200STAIH2A terminal board against the installed Mark VIe record.
What installed interfaces must be checked for IS230SNAIH2A?	Verify the IS200STAIH2A terminal board, all 1 PAIC pack position, Ethernet connections and field terminals used by IS230SNAIH2A.
Which configuration values must be preserved before removing IS230SNAIH2A?	Archive the Mark VIe I/O mapping, controller diagnostics and the channel assignments associated with IS230SNAIH2A.
How should the field wiring for IS230SNAIH2A be verified?	Trace every used terminal on IS200STAIH2A to the approved field drawing before reconnecting IS230SNAIH2A.

Lifecycle Status

IS230SNAIH2A catalog record	GEZ-S2029 lists IS230SNAIH2A as the no-price-impact catalog number corresponding to IS230STAIH2A.
Document boundary	The 2015 notice establishes the catalog mapping and hardware composition; it does not confirm the current manufacturing phase.
Service planning	Plan replacement around the simplex PAIC/IS200STAIH2A execution and the installed Mark VIe configuration.

Available Unit Details

Offered reference	General Electric IS230SNAIH2A.
Assembly identity	1 PAIC I/O pack, IS200STAIH2A terminal board, simplex execution, DIN-rail format.
Supply-scope check	Confirm the visible catalog label, installed pack positions, terminal hardware and any separately supplied connectors in the quotation.

Alternative Names

Reference variant	GE IS230SNAIH2A Mark VIe Analog I/O
Reference variant	IS230SNAIH2A PAIC IS200STAIH2A DIN Rail Module

05 Technical notes, ordering and enquiry

What should be checked before energizing IS230SNAIH2A?	Confirm pack seating, terminal torque, shield handling, IONet connection and the approved simplex architecture for IS230SNAIH2A.
How can a suspected IS230SNAIH2A fault be separated from an external fault?	Check terminal-board wiring, pack power, IONet status and controller diagnostics before controlled substitution of IS230SNAIH2A.
What proves that IS230SNAIH2A is operating correctly after installation?	A controlled analog i/o test must produce the expected field response and clean Mark VIe diagnostics for IS230SNAIH2A.
What should be retained in the handover record for IS230SNAIH2A?	Retain the IS230SNAIH2A label, PAIC/IS200STAIH2A composition, connection photographs, diagnostics and controlled-test result.

Technical notes

Identity control	Use IS230SNAIH2A, not IS230STAIH2A, as the offered catalog number and compare the complete label before installation.
Hardware relationship	The documented assembly uses 1 PAIC I/O pack with IS200STAIH2A; confirm these parts against the available unit.
Commissioning boundary	Restore the approved analog i/o mapping, IONet path and controller diagnostics before returning the channel to service.

Ordering checks

Match the complete marking	Compare every token in IS230SNAIH2A with the installed label and the applicable manufacturer document.
Verify the assembly boundary	Confirm the terminal board, I/O pack, connector, carrier or matched-system components that belong with IS230SNAIH2A.

What happens after you enquire

Review the exact reference	Send the complete IS230SNAIH2A marking, installed-system context and required quantity.
Confirm the hardware boundary	Review the offered IS230SNAIH2A assembly, included hardware and matching evidence.
Arrange dispatch	Confirm quantity, destination and the dispatch date in the quotation.
