### 330102-00-70-10-01-05 Evidence-Bounded Product Information Manual

Baker Hughes / Bently Nevada configured 3300 XL 8 mm proximity probe

#### DOCUMENT SCOPE

Independent Apter Power manual compiled only from the cited Baker Hughes / Bently Nevada manufacturer sources. No product photograph is included.

## Workflow and system context

Bently Nevada 330102-00-70-10-01-05 is an evidence-bounded configured 3300 XL 8 mm proximity probe. System role: It is a configured 3300 XL 8 mm proximity probe with 3/8-24 UNF thread and stainless-steel armor.

- |    |                                                                                                                                                                     |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | System Inputs: It is a configured 3300 XL 8 mm proximity probe with 3/8-24 UNF thread and stainless-steel armor.                                                    |
| 02 | Processing: Use only with the matching 3300 XL 8 mm extension cable and Proximitar sensor so the documented system length and electrical calibration are preserved. |

## Published context and boundaries

- |    |                                                                                                                                             |
|----|---------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | Verify the complete Bently Nevada 330102-00-70-10-01-05 physical label and installed-system documentation before use.                       |
| 02 | The full five-field ordering code is configuration-specific; do not merge it with another case length, connector, cable or approval option. |
| 03 | Origin and HS code remain unpublished unless an exact manufacturer record or the physical package label establishes them.                   |

## Verification and release checks

|    |                                                                                                                                             |
|----|---------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | Verify the complete Bently Nevada 330102-00-70-10-01-05 label, revision and installed-system documentation before use.                      |
| 02 | The full five-field ordering code is configuration-specific; do not merge it with another case length, connector, cable or approval option. |
| 03 | De-energize the equipment and follow the site's approved electrical and process-safety procedure before disturbing hardware or wiring.      |
| 04 | Back up controller, drive, network and configuration data before replacement, migration or firmware work.                                   |
| 05 | Verify every companion module, cable, connector, termination and power source from approved drawings.                                       |
| 06 | Do not copy electrical, communication, mechanical or lifecycle values from a related model or successor.                                    |

## Identity and release controls
