GE IC693PWR321

Series 90-30 Expansion-Backplane Power Supply

Module family	Series 90-30 expansion-backplane supply
AC input, nominal	120/240 V
DC input, nominal	125 V
Output capacity	Confirm for installed revision
Rack fit	Verify against installed backplane

Establish the supply and rack boundary

IC693PWR321 is listed for a Series 90-30 expansion backplane with nominal 120/240 V AC or 125 V DC input. Confirm the installed source, backplane and fitted module load before selecting a replacement.

Input and capacity boundary

The available current manufacturer source names the nominal input alternatives but does not establish output wattage or rails for this exact revision. Preserve the installed wiring and verify sizing from the applicable full technical data.

Technical basis

Emerson PACSystems RX3i System Manual, GFK-2314AG, January 2025. The exact-model input listing supports this concise reference; output ratings remain unassigned.
