

APTER POWER PRODUCT MANUAL

39ACM24BAN 16139-76/09

APACS+ Advanced Controller Module, BAN Revision Verification Required with additional 16139-76/09 marking

The Siemens 39ACM24BAN is identified by Siemens in the APACS+ product context. The reviewed Siemens public cancellation appendix lists the later 39ACM24BEN controller but does not list the BAN revision; memory and revision details for 39ACM24BAN are therefore not inferred. The additional 16139-76/09 marking is retained as part of this requested full identity, but its ordering or revision relationship is not established by the reviewed public Siemens documents.

In the installed system, it supports controller execution and coordination within an installed APACS+ system and handles controller logic, module-bus data, and system communications as defined by the installed APACS+ configuration. Retain the /09 assembly mark when matching firmware and the application database.

Manufacturer	Siemens
Prepared by	Apter Power
Document ID	AP-SIE-09-39ACM24BAN-16139-76-09-PM-R1
Revision	R1
Issue date	2026-08-14

1. Product Overview and Identity

The Siemens 39ACM24BAN is identified by Siemens in the APACS+ product context. The reviewed Siemens public cancellation appendix lists the later 39ACM24BEN controller but does not list the BAN revision; memory and revision details for 39ACM24BAN are therefore not inferred. The additional 16139-76/09 marking is retained as part of this requested full identity, but its ordering or revision relationship is not established by the reviewed public Siemens documents.

In the installed system, it supports controller execution and coordination within an installed APACS+ system and handles controller logic, module-bus data, and system communications as defined by the installed APACS+ configuration. Retain the /09 assembly mark when matching firmware and the application database.

Model Configuration

Field	Verified information
Complete model	39ACM24BAN 16139-76/09
Manufacturer	Siemens
Product description	APACS+ Advanced Controller Module, BAN Revision Verification Required with additional 16139-76/09 marking

Key Features

- Exact 39ACM24BAN 16139-76/09 identity retained
- Manufacturer-source data separated from unconfirmed values
- Siemens
- System context: APACS+
- Model-specific lifecycle and installation guidance

2. Technical Specifications

Only manufacturer-confirmed information is stated. Values absent from the named Siemens source are marked for nameplate or document verification.

Parameter	Verified value
Manufacturer	Siemens
Published base model	39ACM24BAN
Published designation	APACS+ Advanced Controller Module, BAN Revision Verification Required
System	APACS+
Additional physical marking	16139-76/09; verify on the complete nameplate
Model-specific focus	Controller-revision audit
Unpublished values	Not inferred from another revision or suffix

Verification Note

Use the complete 39ACM24BAN 16139-76/09 identity. The exact 39ACM24BAN revision was not found in the reviewed public Siemens lifecycle appendix. Treat it as legacy APACS+ hardware and confirm status from Siemens and the nameplate. The 16139-76/09 relationship still requires physical-nameplate confirmation. Values not published in the cited Siemens source are intentionally not inferred.

3. Functions, Applications and Components

Core Functions

- In the installed system, it supports controller execution and coordination within an installed APACS+ system and handles controller logic, module-bus data, and system communications as defined by the installed APACS+ configuration. Retain the /09 assembly mark when matching firmware and the application database.
- Maintains the documented APACS+ system role for this exact identity.
- Provides an exact reference for engineering, maintenance, and quotation review.

Application Areas

Application	System role
Controller-revision audit	Retain the /09 assembly mark when matching firmware and the application database.
Legacy DCS maintenance	Preserve both 39ACM24BAN and 16139-76/09 in the service record.
Migration preparation	Capture configuration, drawings, and test evidence before redesigning the APACS+ function.

Compatible Components

- The exact APACS+ rack, backplane, and project recorded for the plant
- Firmware, connector, termination, and channel configuration verified for 39ACM24BAN 16139-76/09
- Only field circuits or communications paths documented for the exact installed module

Lifecycle Status

The exact 39ACM24BAN revision was not found in the reviewed public Siemens lifecycle appendix. Treat it as legacy APACS+ hardware and confirm status from Siemens and the nameplate. The 16139-76/09 relationship still requires physical-nameplate confirmation.

4. Installation Precautions

- Photograph the complete 39ACM24BAN 16139-76/09 nameplate and PCB revision
- Archive the APACS+ project and all affected channel or network records
- Do not infer electrical data from another 39ACM24BAN assembly marking
- Verify rack, connector, firmware, and field circuit before insertion
- Complete a model-specific functional test before returning the process to service

STOP - Verify before installation

Use the complete 39ACM24BAN 16139-76/09 identity. The exact 39ACM24BAN revision was not found in the reviewed public Siemens lifecycle appendix. Treat it as legacy APACS+ hardware and confirm status from Siemens and the nameplate. The 16139-76/09 relationship still requires physical-nameplate confirmation. Values not published in the cited Siemens source are intentionally not inferred.

Use the physical nameplate and current Siemens documents as the controlling records.

5. Official Source and Use Notice

Official source

Siemens APACS+ lifecycle documentation for the ACM family and the physical 39ACM24BAN nameplate. Physical nameplate verification is required for the additional 16139-76/09 marking.
