F4332D 3HAC024322-001 Installation & Verification Guide

A field-focused guide for recording, exchanging and proving F4332D 3HAC024322-001 in its documented ABB IRC5 Panel Mounted Controller, large execution relationship.

01 Capture the installed arrangement

Record	Required evidence
Exact marking	F4332D 3HAC024322-001
Installed position	Cabinet, rack, slot, circuit or mechanical location
Companion hardware	Connected module, carrier, socket, protection or field-interface identity
Wiring / interface	Terminal numbers, connector orientation, cable identity and protective earth
Configuration	Approved settings, jumpers, software version and application baseline
Operating baseline	Normal diagnostics, measured values and process response

Pre-removal controls

Isolate the robot controller
Lock out mains and prove stored energy discharged.

Label line and load
Record all power and protective-earth conductors.

Preserve the PMC execution
Match the large panel-mounted controller arrangement.

Inspect mounting
Check filter supports, insulation and cabinet clearances.

Verify earth continuity
Complete the approved protective-bond test.

Energize under control
Start the controller with robot motion inhibited.

Model-specific checkpoints

ABB article number	3HAC024322-001
Marking reference	F4332D
Documented function	Mains line filter
Controller execution	Panel Mounted Controller, large
Equipment status	Standard for PMC large
Installation area	Controller power-entry path
Replacement identification	Serial number, article number and revision
Service boundary	Line-side and controller-side conductors

Installed-system service map

Commissioning boundary	Protective earth, isolation and controller startup
IRC5 PMC-large power entry	Provide the documented mains-filter component in the large panel-mounted controller.
Robot-controller maintenance	Restore conductor identity, protective earth and mounting geometry.
Electrical-noise control	Retain the installed filtered mains path and cabinet bonding arrangement.

02 Controlled replacement and commissioning sequence

01 Plan	Send the complete F4332D 3HAC024322-001 marking, revision labels, current-unit photographs and installed position.
02 Isolate	Apply the approved electrical and process isolation; prove the safe state.
03 Record	Photograph labels, terminals, connector positions and the before-removal baseline.
04 Compare	Check complete marking, interface execution and included scope against the retained record.
05 Install	Restore grounding, cable support, clearances and protective parts without forced alignment.
06 Configure	Restore only the approved settings and documented installed-system relationship.
07 Energize	Apply power in the approved sequence and resolve abnormal diagnostics before application enable.
08 Prove	Compare the offered F4332D 3HAC024322-001 interfaces, ratings and included items with the approved system record before ordering.
09 Handover	Retain readings, photographs, configuration evidence and accepted deviations.

Commissioning and acceptance evidence

Identity	Exact marking and current-unit photographs
Mechanical	Mounting, alignment, clearance and cable-support record
Electrical	Supply, protective earth, terminals, continuity and interface identity
Configuration	Approved settings, application and companion hardware
Functional result	Representative control, communication, relay or protection proof
Release	Technician, date, deviation disposition and handover record

Targeted engineering questions

How should protective earth be verified for F4332D 3HAC024322-001?

Inspect bonding points and confirm continuity using the site-approved test method before controller energization.

What wiring errors can affect F4332D 3HAC024322-001 after replacement?

Reversed line/load routing, loose terminals, damaged insulation or omitted earth bonding can compromise the controller power path.

What controlled startup follows installation of F4332D 3HAC024322-001?

Energize the controller with robot motion inhibited, verify power and diagnostics, then release the approved robot startup sequence.

What should the acceptance record for F4332D 3HAC024322-001 contain?

Retain conductor checks, earth-continuity result, controller diagnostics, article and revision data, and final controlled-start result.
