

APTER POWER INSTALLATION & VERIFICATION REFERENCE

PU410-3BSE056478R1

Field checklist for identity control and legacy-system evidence

ENGINEERING LENS	IDENTITY CONTROL AND LEGACY-SYSTEM EVIDENCE
SYSTEM	ABB Advant engineering hardware
SOURCE CONTROL	Manufacturer-published information only

This separate field reference focuses on identity control and legacy-system evidence. It does not replace the current ABB installation, safety, or commissioning instructions.

Manufacturer	ABB
Prepared by	Apter Power
Document ID	AP-ABB-01-PU410-3BSE056478R1-IV-R1
Revision	R1
Issue date	2026-08-14

1. Pre-Installation Decision Gates

Step	Gate	Required evidence
1	Identity	Match every character of PU410-3BSE056478R1; photograph all labels, revisions, and option markings.
2	Host architecture	Confirm the exact ABB Advant engineering hardware rack, slot, controller, project, and approved topology.
3	Primary risk	Document the evidence for identity control and legacy-system evidence before disconnection or energization.
4	Electrical / signal	Verify supply, signal type, range, polarity, grounding, shielding, pinout, and load from the exact manufacturer document.
5	Lifecycle	ABB identifies related PU410 engineering hardware in a current connected-products notice, but the lifecycle phase of the complete PU410-3BSE056478R1 code is not stated in the reviewed public source.
6	Commissioning	Use the manufacturer test procedure, capture measured results, and obtain release authorization before return to service.

Model-Specific Precautions

- Match every character of PU410-3BSE056478R1 to the physical nameplate before work.
- Use the exact ABB manual, wiring drawing, and safety instructions for the installed revision.
- De-energize and apply the required lockout, discharge, ESD, and stored-energy controls before removal.
- Back up firmware, parameters, controller project, calibration, and network settings where applicable.
- Verify supply, signal type, polarity, grounding, shielding, connector pinout, load, and environmental limits.
- Commission with the manufacturer test procedure and record results before returning equipment to service.

2. Wiring, Configuration and Commissioning Record

Record item	Site entry
Physical model / article	
Serial / hardware revision	
Host system / machine	
Rack / slot / physical location	
Supply and grounding checked	
Signal type / range / pinout	
Firmware / project / calibration backup	
Functional or safety test result	
Technician / reviewer / date	

Stop Condition

Do not energize PU410-3BSE056478R1 if any suffix, supply, pinout, host-system assignment, safety classification, or identity control and legacy-system evidence requirement remains unresolved.

3. Source Basis and Field Handover

Official manufacturer source

ABB EU Data Act Information Notice for Connected Products - Advant Controllers, document 7PAA021740; exact 3BSE056478R1 function not published in the reviewed source.

https://library.e.abb.com/public/09b2dfa056184b6e8828de53de3520c2/7PAA021740_B_en_EU%20DATA%20ACT%20-%20Information%20Notice%20for%20Connected%20Products%2C%20Advant%20Controllers.pdf

Handover Checklist

Handover item	Status
Manufacturer document attached	
Nameplate photographs archived	
Project / settings backup archived	
Test evidence approved	
Lifecycle or migration action recorded	

Important Notice

This Apter Power checklist is not a ABB installation instruction. The current manufacturer documentation, physical nameplate, host-equipment manual, safety study, and site procedures control all work.
