HITE303278R1 Technical Reference

ABB HITE303278R1 Procontic Control Module with verified technical identity, model-specific selection data and controlled commissioning guidance.

01 Source-to-marking review

Order reference	HITE303278R1
Hardware class	Procontic Control Module
Installed family	ABB Procontic installed-base control systems
Manufacturer identity	ABB
Technical basis	Exact-model installed-base records for ABB HITE303278R1 / IDB559B
Use limit	Apply only to the complete marking and documented installed relationship

02 Technical evidence matrix

Complete module reference	HITE303278R1	Confirm complete module reference against the delivered label or installed record.
Associated board reference	IDB559B	Confirm associated board reference against the delivered label or installed record.
Manufacturer	ABB	Confirm manufacturer against the delivered label or installed record.
System family	Procontic installed base	Confirm system family against the delivered label or installed record.
Product class	Control module / printed circuit board	Confirm product class against the delivered label or installed record.
Installation format	Plug-in control-system board	Confirm installation format against the delivered label or installed record.
Service boundary	Rack, slot, backplane and field interfaces	Confirm service boundary against the delivered label or installed record.
Configuration boundary	Installed application and signal assignments	Confirm configuration boundary against the delivered label or installed record.

Evidence classification

Exact marking
The complete order reference controls the commercial identity.

Documented value
Use only where the technical record supports the stated execution.

Installed relationship
Confirm from the existing cabinet, machine or system record.

Excluded assumption
Do not infer an adjacent suffix, rating or execution.

Documented application context

Procontic control-rack service
Restore the documented board in its approved slot and backplane.

Legacy control-system maintenance
Preserve database, signal assignments and adjacent-module relationships.

Board-level fault isolation
Separate power, backplane, connector and application causes.

Exact-model spare planning
Match HITE303278R1, IDB559B and all revision labels.

03 Compatibility decision matrix

Identity gate	Does the installed marking agree with HITE303278R1?	Stop if any suffix or auxiliary marking differs.
Platform gate	Is the arrangement documented for ABB Procontic installed-base control systems?	Confirm the carrier, base, circuit or system record.
Interface gate	Do physical and electrical interfaces match?	Compare terminals, connectors, mounting and protection.
Rating gate	Are documented ratings suitable at the operating point?	Check supply, load, duty and companion limits.
Configuration gate	Can the approved settings be restored?	Retain jumpers, software, wiring and assignments.
Acceptance gate	Can the installed function be proven?	Define measured evidence before release.

Marking-focused review prompts

Confirm complete module reference	Expected record: HITE303278R1
Confirm associated board reference	Expected record: IDB559B
Confirm manufacturer	Expected record: ABB
Confirm system family	Expected record: Procontic installed base
Confirm product class	Expected record: Control module / printed circuit board
Confirm installation format	Expected record: Plug-in control-system board
Confirm service boundary	Expected record: Rack, slot, backplane and field interfaces
Confirm configuration boundary	Expected record: Installed application and signal assignments

Offer-screening evidence package

- Photograph the entire HITE303278R1 marking without cropping suffixes.
- Provide the installed cabinet, machine or circuit reference and companion-part identities.
- Compare interfaces, ratings, configuration and included scope with the approved record.
- Resolve every discrepancy in writing before the item is released for dispatch.

Engineering acceptance questions

Which secondary marking should be recorded with HITE303278R1?

Exact-model records associate HITE303278R1 with IDB559B; retain both markings and every revision label.

How should the rack position of HITE303278R1 be documented?

Photograph cabinet, rack, slot, backplane connector and adjacent modules before removal.

Which system records must be protected before replacing HITE303278R1?

Back up the Procontic application, signal assignments, parameters and active version.

What ESD controls apply to HITE303278R1?

Use grounded handling and antistatic packaging and protect board edges and connector contacts.
