# Bently Nevada 3300/30

## 3300/30 Evidence-Bounded Product Information Manual

Baker Hughes / Bently Nevada six-channel thermocouple temperature monitor

### DOCUMENT SCOPE

Independent Apter Power manual compiled only from the cited Baker Hughes / Bently Nevada manufacturer sources. No product photograph is included.

## Workflow and system context

Bently Nevada 3300/30 is an evidence-bounded six-channel thermocouple temperature monitor. System role: It provides six thermocouple temperature-monitoring channels in the documented legacy 3300 rack architecture.

|    |                                                                                                                                             |
|----|---------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | System Inputs: It provides six thermocouple temperature-monitoring channels in the documented legacy 3300 rack architecture.                |
| 02 | Processing: Use only with the exact host, terminal base, cable, firmware and engineering configuration documented for the installed system. |

## Published context and boundaries

|    |                                                                                                                                                    |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | Verify the complete Bently Nevada 3300/30 physical label and installed-system documentation before use.                                            |
| 02 | Verify thermocouple type, alarm setpoints, rack power/input module, channel configuration and revision; do not copy 3300/35 or other monitor data. |
| 03 | Origin and HS code remain unpublished unless an exact manufacturer record or the physical package label establishes them.                          |

## Verification and release checks

|    |                                                                                                                                                    |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | Verify the complete Bently Nevada 3300/30 label, revision and installed-system documentation before use.                                           |
| 02 | Verify thermocouple type, alarm setpoints, rack power/input module, channel configuration and revision; do not copy 3300/35 or other monitor data. |
| 03 | De-energize the equipment and follow the site's approved electrical and process-safety procedure before disturbing hardware or wiring.             |
| 04 | Back up controller, drive, network and configuration data before replacement, migration or firmware work.                                          |
| 05 | Verify every companion module, cable, connector, termination and power source from approved drawings.                                              |
| 06 | Do not copy electrical, communication, mechanical or lifecycle values from a related model or successor.                                           |

### Identity and release controls

|                     |                           |
|---------------------|---------------------------|
| Verification Status | Verified Evidence Bounded |
|---------------------|---------------------------|
