Product role and published parameters

WHAT IT IS, WHAT IT DOES, AND WHERE IT FITS

Honeywell CC-TCF901 51308301-175 is the nine-port CF9 Control Firewall input/output termination assembly for compatible Experion PKS installations. Use CC-TCF901 51308301-175 only with the exact host, rack or chassis, terminal hardware, cable and project configuration specified for the installed system. System context: CF9 control-firewall IOTA.

Published field	Manufacturer-published value or verified identity note
Model	CC-TCF901
Part number	51308301-175
Product type	Control Firewall IOTA
Ethernet ports	9 RJ-45 ports
Architecture	Eight in-cabinet FTE connections plus one supervisory uplink
Verification Status	Verified Product Reference

System function and signal path

01	System Inputs: CF9 control-firewall IOTA
02	Processing: Use CC-TCF901 51308301-175 only with the exact host, rack or chassis, terminal hardware, cable and project configuration specified for the installed system.

Applications and answers

1 Installed-base maintenance: Supports identification and maintenance planning for Honeywell CC-TCF901 51308301-175.

2 Compatibility review: Compares the exact hardware, host, rack or chassis, terminal assembly, cable and revision before replacement.

3 Installation planning: Defines the isolation, mounting, wiring and configuration checks required before field work.

4 Commissioning and troubleshooting: Supports controlled power, communication, channel, diagnostic and alarm checks after work.

Frequently asked questions

How do I confirm compatibility with the installed system?	Match the complete model and part number, host system, rack or chassis, terminal assembly, cable, firmware and project documentation.
What should be checked before ordering a replacement?	Provide clear nameplate photos and verify the installed slot, connector, terminal hardware, field wiring and required revision.
Can a similar Honeywell or related model be used as a direct replacement?	Only when the manufacturer documentation and the installed project explicitly approve that exact substitution.
What must be checked before installation?	Confirm isolation, power, keying, mounting, connector orientation, cable code, wiring polarity and the latest configuration backup.
Can the product be installed or removed while energized?	Follow the exact hardware manual and site procedure; otherwise de-energize the circuit before handling the hardware or field wiring.
How should wiring and termination be verified?	Compare every conductor, shield, polarity, terminal number and field supply with the approved drawings before moving any wire.
