

A8PU05ABFW02

legacy drive identifier

The A8PU05ABFW02 is an ABB legacy drive identifier. It requires manufacturer/nameplate confirmation before a control function or electrical rating is assigned.

Manufacturer	ABB / Elsag Bailey
Complete model	A8PU05ABFW02
Product description	legacy drive identifier
Prepared by	Apter Power
Document ID	AP-ABB-A8PU05ABFW02-PR-R1
Revision / issue	R1 / 2026-08-26

A8PU05ABFW02

1. Product overview and identity

The A8PU05ABFW02 is an ABB legacy drive identifier. It requires manufacturer/nameplate confirmation before a control function or electrical rating is assigned.

System function

Requires manufacturer/nameplate confirmation before a control function or electrical rating is assigned.

Verified technical information

Parameter	Verified value
Manufacturer	ABB
Complete model	A8PU05ABFW02
Verified product description	legacy drive identifier
System function	requires manufacturer/nameplate confirmation before a control function or electrical rating is assigned
Direct field signals	See exact manufacturer manual and installed-system drawings
Revision / option status	Verify complete physical nameplate
Unpublished values	Not inferred

2. Integration and verification

Signals and data handled

Signal types and electrical ratings are defined by the cited manufacturer document and the installed-system configuration. Values not stated for this exact complete identifier are intentionally omitted.

Companion components

Use only the controller, rack, terminal unit, cable, sensor, actuator or power components explicitly documented for the installed ABB system and revision.

Common industrial applications

Industrial automation, process control, machinery, utilities or robotics installations using the named ABB product family; exact use depends on the approved system design.

Product precautions

- The accessible ABB material does not establish a complete functional specification for this exact identifier; obtain the product-specific ABB record or nameplate before use.
- Match the complete model, order code, revision and physical construction before installation or replacement.
- Use only the electrical ratings, wiring and environmental limits stated in the applicable ABB document.
- Record the existing configuration and test every affected signal, communication path and safety function before release.
