

05704-A-0145

Installation and Verification Guide | Four-Channel 4-20 mA Control Card

Installation sequence

1	Isolate the applicable System 57 control rack in accordance with the site safety procedure.
2	Confirm the 05704-A-0145 card identity and the intended 5704 slot position.
3	Check each field loop against the approved transmitter and alarm documentation.
4	After installation, complete the specified loop and alarm verification before returning the panel to service.

System and commissioning context

Install the card in a matching 5704 system only. The installed rack, field transmitter wiring, alarm strategy and associated relay or interface cards determine the complete monitoring function.

Important Notice: Verify the 05704-A-0145 label, matching 5704 rack position, transmitter loop wiring, configured gas range and alarm configuration before energizing the system.

Model-specific questions

Frequently asked questions	Answer
What host system is required for 05704-A-0145?	Use 05704-A-0145 only with the matching Honeywell system family and the exact companion hardware stated in the approved project documentation.
How should 05704-A-0145 be verified before installation?	Match the complete 05704-A-0145 label, installed location, connectors or terminals, wiring and current project configuration before installation.
Can 05704-A-0145 replace a similarly named Honeywell item?	No direct substitution should be assumed for 05704-A-0145. Confirm the exact identifier, system position and approved replacement procedure before any change.
What must be checked when wiring 05704-A-0145?	Check the approved terminal assignment, polarity where applicable, shielding or grounding requirements, and all connected companion hardware for 05704-A-0145.
How should 05704-A-0145 be commissioned?	Commission 05704-A-0145 through the host system's documented functional or loop-check procedure and record the final configuration and test result.
