

05704-A-0145

Application and Configuration Guide | Four-Channel 4-20 mA Control Card

Honeywell 05704-A-0145 is a four-channel 4-20 mA control card for the Honeywell System 57 / 5704 product family. It brings compatible field transmitter signals into the modular gas-detection control arrangement.

Application features

- Modular System 57 controller component
- Analog current signal interface
- Four-channel control-card architecture
- 5704 gas-detection system application

Use and configuration

Install the card in a matching 5704 system only. The installed rack, field transmitter wiring, alarm strategy and associated relay or interface cards determine the complete monitoring function.

Pre-use verification

1	Isolate the applicable System 57 control rack in accordance with the site safety procedure.
2	Confirm the 05704-A-0145 card identity and the intended 5704 slot position.
3	Check each field loop against the approved transmitter and alarm documentation.
4	After installation, complete the specified loop and alarm verification before returning the panel to service.

Important Notice: Verify the 05704-A-0145 label, matching 5704 rack position, transmitter loop wiring, configured gas range and alarm configuration before energizing the system.
