Workflow and system context

Honeywell 621-9937 is a parallel I/O module for IPC 620 I/O racks containing 8-, 16- or 32-point modules. The ipc 620 parallel i/o module function is used with the exact Honeywell host, companion hardware, field wiring and configuration selected for the installed system.

- | | |
|----|--|
| 01 | System Function: IPC 620 Parallel I/O Module |
| 02 | Verification Path: Confirm the exact 621-9937 nameplate, Honeywell host, companion hardware, field wiring and commissioned process response. |

Published context and boundaries

- | | |
|----|--|
| 01 | Verify the exact Honeywell model, part number, installed host, wiring and configuration before replacement. |
| 02 | Verify 621-9937 and the complete part number on the physical nameplate before installation. |
| 03 | Confirm that the installed Honeywell platform and companion hardware support the IPC 620 Parallel I/O Module function. |

Verification and release checks

01	Verify 621-9937 and the complete part number on the physical nameplate before installation.
02	Confirm that the installed Honeywell platform and companion hardware support the IPC 620 Parallel I/O Module function.
03	Isolate all applicable power and field energy before removing or installing 621-9937.
04	Use ESD controls and protect the connectors, terminals and printed-circuit assembly of 621-9937.
05	Record the existing wiring, jumpers, switches, firmware and configuration before replacement.
06	Do not transfer ratings, wiring or configuration from a similar Honeywell model to 621-9937.
