

A5E36717808

SINAMICS IGD2/R4 Power-block Board

Siemens A5E36717808 is a service component handled within the documented SINAMICS Power Block hardware-maintenance workflow. Its installation must be matched to the complete power-unit nameplate, hardware revision, connector arrangement and approved Siemens documentation.

BRAND	Siemens	FAMILY	SINAMICS Power Block
PART	A5E36717808	SYSTEM ROLE	Preserves the complete Siemens article identifier

MANUFACTURER SOURCE RECORD

Siemens COMPAS product and price record
Siemens COMPAS record identifies A5E36717808

Product Overview

SYSTEM FUNCTION

Siemens A5E36717808 is a service component handled within the documented SINAMICS Power Block hardware-maintenance workflow. Its installation must be matched to the complete power-unit nameplate, hardware revision, connector arrangement and approved Siemens documentation.

FUNCTION 1

Preserves the complete Siemens article identifier

FUNCTION 2

Supports a documented SINAMICS power-unit service boundary

FUNCTION 3

Requires controlled DC-link isolation and discharge

FUNCTION 4

Returns to service only after connection and diagnostic verification

System Components

COMPONENT	DOCUMENTED ROLE
Host / carrier	SINAMICS Power Block
Primary interface	Preserves the complete Siemens article identifier
Engineering context	Match A5E36717808 to the installed SINAMICS power unit and approved maintenance record. Follow the Siemens manual for isolation, DC-link discharge, connections, grounding, cooling and recommissioning.
Commissioning duty	Energize in stages and verify power-unit diagnostics before enabling the motor.

TECHNICAL NOTE

Isolate the complete drive supply and prove the DC link discharged before installing A5E36717808. Record the host revision and all power, control, cooling and protective-conductor connections; complete staged diagnostics before motor operation.

Technical Data

PARAMETER	VALUE	PARAMETER	VALUE
Article identifier	A5E36717808	Board designation	IGD2/R4
Manufacturer	Siemens	AC voltage class	690 V
System documentation	SINAMICS Power Block	DC-link voltage	1080 V DC
Service context	Drive power-unit maintenance	Current class	260 A
Configuration boundary	Installed system record	Thermal interface	TIM

ENGINEERING BOUNDARY

Confirm A5E36717808, host power-unit designation, hardware revision, power and control interfaces, DC-link discharge, grounding, cooling, firmware, parameter backup and controlled diagnostic results before commissioning.

Applications and Precautions

Common Applications

SINAMICS power-unit repair

Supports an article-controlled service operation in the matching drive cabinet.

Drive cabinet refurbishment

Provides an exact reference for documenting removed and installed power hardware.

Power-stage connection restoration

Guides controlled recovery of busbar, gate, sensor and protective-conductor interfaces.

Post-repair recommissioning

Supports staged diagnostics and motor-enable checks after approved maintenance.

Product Precautions

- 1

Confirm the complete A5E36717808 marking and the installed SINAMICS power-unit nameplate.
- 2

Isolate incoming power, lock out the drive and prove the DC link discharged.
- 3

Record every busbar, semiconductor, gate-drive, sensor and cooling connection.
- 4

Use ESD controls and protect all control connectors and insulation surfaces.
- 5

Match hardware revision, connector coding and mechanical interfaces to the as-found assembly.
- 6

Restore protective grounding, shielding, cooling paths and cabinet clearances.
- 7

Reload only the approved drive project, firmware and parameter backup.
- 8

Energize in stages and verify power-unit diagnostics before enabling the motor.

IMPORTANT NOTICE

Confirm A5E36717808, host power-unit designation, hardware revision, power and control interfaces, DC-link discharge, grounding, cooling, firmware, parameter backup and controlled diagnostic results before commissioning.

ACCEPTANCE CHECK	REQUIRED EVIDENCE
Identity	A5E36717808
Configuration	Reload only the approved drive project, firmware and parameter backup.
Functional release	Energize in stages and verify power-unit diagnostics before enabling the motor.

Engineer FAQ

Q1 What exact function does A5E36717808 perform as a SINAMICS IGD2/R4 Power-block Board?

It is the Siemens IGD2/R4 power-block board identified for 690 V, 1080 V DC and 260 A service with a TIM thermal interface.

Q3 Which connection checks are required for A5E36717808?

Match all power, busbar, gate-drive, sensor, protective-earth and cooling interfaces to the recorded host assembly.

Q5 Which diagnostic evidence should be reviewed for A5E36717808?

Review DC-link, power-unit, gate-drive, temperature, cooling and communication diagnostics before motor enable.

Q7 How should A5E36717808 be commissioned after installation?

Energize the power unit in the Siemens commissioning sequence, verify diagnostics and perform a controlled no-load test.

Q2 Which host system must be confirmed before installing A5E36717808?

Confirm the documented SINAMICS Power Block host and the complete A5E36717808 marking before work.

Q4 How should the installed configuration for A5E36717808 be preserved?

Restore only the approved SINAMICS project, firmware and parameter set associated with the installed power unit.

Q6 What must be recorded before replacing A5E36717808?

Record the complete article and host nameplates, hardware revisions, connection photographs, removed-part identity and parameter backup.

Q8 Which model-specific limitation applies to A5E36717808?

The official system manuals do not permit ratings to be inferred from the A5E identifier alone; the installed nameplate remains the acceptance boundary.
