

INDUSTRIAL AUTOMATION PRODUCT

3500/05-01-02-01-00-01

3500/05 System Rack

Bently Nevada 3500/05-01-02-01-00-01 is a 3500/05 System Rack for the 3500 Machinery Protection System. It houses the 3500 power supplies and monitoring modules in the documented 14-slot EIA rack.

IDENTITY	VERIFIED VALUE
Manufacturer	Bently Nevada
System family	Bently Nevada 3500 Machinery Protection System
Part number	3500/05-01-02-01-00-01
Product role	Provides fourteen full-size module positions
Lifecycle	Installed product record

DOCUMENT SCOPE

Exact-article identity, technical data, host role, installation checks, applications, precautions and engineering verification.

MODEL-SPECIFIC ENGINEERING NOTE

Before removing 3500/05-01-02-01-00-01, record the complete marking, installed position, mating hardware, connectors, wiring and configured channel role. Restore the documented arrangement, review system diagnostics and complete a controlled functional test before release.

3500/05-01-02-01-00-01

Technical Specifications

Technical values below are limited to the named Bently Nevada product record and directly applicable manufacturer documentation.

PARAMETER	VALUE	PARAMETER	VALUE
Complete order number	3500/05-01-02-01-00-01	Approval	CSA/NRTL Class I, Division 2
Rack size	19-inch, 14-slot	European compliance	CE
Mounting	Full-size EIA rack mount		

Verified Product Record

DATA GROUP	VERIFIED VALUE
Installed host / carrier	Bently Nevada 3500 Machinery Protection System
Primary system role	Provides fourteen full-size module positions
Connection boundary	Before removing 3500/05-01-02-01-00-01, record the complete marking, installed position, mating hardware, connectors, wiring and configured channel role. Restore the documented arrangement, review system diagnostics and complete a controlled functional test before release.
Controlled acceptance duty	3500 rack system integration

ENGINEERING BOUNDARY

Confirm 3500/05-01-02-01-00-01, 3500 rack and slot, module and I/O hardware revisions, terminal or port assignments, wiring, grounding, rack firmware, software configuration, associated accessories and controlled diagnostic and protection-test results before commissioning.

Pre-Installation Checks

1	Confirm the complete 3500/05-01-02-01-00-01 marking and assigned 3500 rack position.	2	Place every affected protection function in the approved maintenance state.
3	Record module, I/O and rack hardware revisions before removal.	4	Record every configured channel, port, relay or power connection.

Documented Service Record

RECORD ITEM	REQUIRED ENTRY
As-found article	3500/05-01-02-01-00-01
Installed host	Bently Nevada 3500 Machinery Protection System
Connection record	Capture before removal
Controlled release	Diagnostics and functional proof

System Role and Architecture

Bently Nevada 3500/05-01-02-01-00-01 is a 3500/05 System Rack for the 3500 Machinery Protection System. It houses the 3500 power supplies and monitoring modules in the documented 14-slot EIA rack.

FUNCTION 1
Provides fourteen full-size module positions

FUNCTION 2
Accepts the redundant 3500 power-supply arrangement

FUNCTION 3
Supports EIA rack mounting

FUNCTION 4
Carries the system backplane and module interconnects

Matched System Components

NO.	DOCUMENTED COMPONENT / ROLE
1	Bently Nevada 3500 Machinery Protection System
2	19-inch, 14-slot
3	3500 rack system integration
4	Before removing 3500/05-01-02-01-00-01, record the complete marking, installed position, mating hardware, connectors, wiring and configured channel role. Restore the documented arrangement, review system diagnostics and complete a controlled functional test before release.

System Integration Record

INTEGRATION ITEM	DOCUMENTED ROLE
Host identity	Bently Nevada 3500 Machinery Protection System
Interface role	Provides fourteen full-size module positions
Field / power context	3500/05-01-02-01-00-01 is installed only in the documented Bently Nevada 3500 Machinery Protection System arrangement with its matching host, terminal, cable or field interface. Commissioning preserves the as-found configuration and uses controlled identity, connection, diagnostic and functional checks.
Commissioning evidence	Perform controlled channel and protection-path tests before service release.

Installation and Connection Checks

1
Isolate applicable rack and field energy and observe ESD controls.

2
Restore the documented rack slot, wiring and software configuration.

3
Review rack, module and communication diagnostics after startup.

4
Perform controlled channel and protection-path tests before service release.

MANUFACTURER SOURCE RECORD

Applications and Engineering Context

3500 rack system integration

Houses the 3500 power supplies and monitoring modules in the documented 14-slot eia rack.

Machinery protection modernization

Restores an exact rack position while retaining the approved protection strategy.

Rotating-equipment monitoring

Supports configured vibration, position, speed or status information in the rack.

Controlled rack recommissioning

Provides the exact module identity used for diagnostics and functional acceptance.

TECHNICAL NOTE

Before removing 3500/05-01-02-01-00-01, record the complete marking, installed position, mating hardware, connectors, wiring and configured channel role. Restore the documented arrangement, review system diagnostics and complete a controlled functional test before release.

Model-Specific Acceptance Evidence

CHECK	ACCEPTANCE CONDITION
Identity	3500/05-01-02-01-00-01 recorded
Host / carrier	Bently Nevada 3500 Machinery Protection System
Physical interface	Provides fourteen full-size module positions
Configuration	Review rack, module and communication diagnostics after startup.
Functional proof	Perform controlled channel and protection-path tests before service release.

IMPORTANT NOTICE

Confirm 3500/05-01-02-01-00-01, 3500 rack and slot, module and I/O hardware revisions, terminal or port assignments, wiring, grounding, rack firmware, software configuration, associated accessories and controlled diagnostic and protection-test results before commissioning.

Controlled Release Summary

RELEASE ITEM	MODEL-SPECIFIC CONDITION
Article identity	3500/05-01-02-01-00-01
Approved role	3500 rack system integration
Final validation	Perform controlled channel and protection-path tests before service release.

Engineering Precautions

- 1

Confirm the complete 3500/05-01-02-01-00-01 marking and assigned 3500 rack position.
- 2

Place every affected protection function in the approved maintenance state.
- 3

Record module, I/O and rack hardware revisions before removal.
- 4

Record every configured channel, port, relay or power connection.
- 5

Isolate applicable rack and field energy and observe ESD controls.
- 6

Restore the documented rack slot, wiring and software configuration.
- 7

Review rack, module and communication diagnostics after startup.
- 8

Perform controlled channel and protection-path tests before service release.
