Overview of this manual

About this manual

This manual contains spare parts for:

- IRB 4600 and all its variants.

Usage

This manual shall be used as a complement to the product manual for IRB 4600 during:

- maintenance work
- repair work.

Who should read this manual?

This manual is intended for:

- maintenance personnel
- repair personnel.

Prerequisites

Maintenance/repair/installation personnel working with an ABB Robot must:

- be trained by ABB and have the required knowledge of mechanical and electrical installation/repair/maintenance work.

Organization of chapters

The manual is organized in the following chapters:

Chapter	Contents
1 Rebuilding robot	Information of rebuilding parts, required when rebuilding the robot to another version.
2 Spare parts and exploded view	Complete spare part list and complete list of robot components shown in exploded views.

Revision	Description
A	The following updates have been made in this revision: - Spare part number changed for the protection cover 3HAC13416-1, new number is 3HAC049770-001, see Spare parts, base cover assembly on page 13 - Motor Type D on axes 4, 5 and 6 added as new spare part. (Note that the motor is not compatible with other types. Also that Type D is not compatible with Foundry Prime) - Spare parts with color Graphite White are added to the spare part lists
B	The following updates have been made in this revision: - Spare part number for Motor (Graphite White) axis 4, other design than type C and D deleted. - New Spare part numbers for "Connection boxes FS130/FS180". See Other parts on page 33. - Spare part numbers added for motors axis 1 and axis 2 Foundry Prime. - Spare part numbers added for gear boxes axis 1, axis 2 and axis 3 Foundry Prime. - Spare part numbers added for gearboxes axis 2. - Spare part number for Lower arm IRB 4600-40/2.55, -20/2.50 (Graphite White) changed to 3HAC042883-008. - Spare parts for option Force sensor package is deleted from this manual. Information could be found in "Product manual - Integrated Force Control". - Generally modified due to update of BOL.
C	Published in release R16.2. The following updates are done in this revision: - Corrections due to updates in SAP terminology. - Updated spare parts due to new standard calibration method (Axis Calibration). - Base - Frame - Lower arm - Arm housing - Tubular shaft unit - Wrist unit
D	Published in release R17.1. The following updates are done in this revision: - Added spare part numbers for protective items for calibration bushings and holes (Axis Calibration) - General updates about overpressure
E	Published in release R17.2. The following updates are done in this revision: - Updated the 3HAB number of axis 3 o-ring in section o-rings & oil plus sealing washer, type c. - Updated 3HAC number of multibus cable. - Updated and added spare part number for brake release unit set.
F	Published in release R18.1. The following updates are done in this revision: - Updated spare parts numbers upper arm. - Updated spare parts numbers brake release boards (was DSQC563 and BRK001).
G	Published in release R18.2. The following updates are done in this revision: New spare part kit for mechanical stop axis 1. See Spare parts, base and frame unit on page 15.
H	Published in release 19B. The following updates are made in this revision: New spare parts for wrist and sealing added. See Complete wrist 12/20 kg on page 30.

Continues on next page

Revision	Description
J	Published in release 20A. The following updates are made in this revision: • Updated spare part numbers for cable harnesses to robots with protection type Foundry Prime.
K	Published in release 20B. The following updates are made in this revision: • New spare parts added: - Connector set R2.Ethernet
L	Published in release 21D. The following updates are made in this revision: • Added information for OmniCore.
M	Published in release 22B. The following updates are made in this revision: • Corrected information about the mechanical stop kit for axis 1. • Corrected spare part number of axis-5 motor (other designs than type C and D).
N	Published in release 23A. The following updates are made in this revision: • Updated the spare part number of arm housing, type C (<i>Foundry</i>) for upper arm -40/2.55 and -20/2.50.
P	Published in release 23C. The following updates are done in this revision: • Added protection type Clean Room for variant IRB 4600 - 60/2.05 and IRB 4600 - 40/2.55.
Q	Published in release 24A. The following updates are done in this revision: • Updated the chapter Options on page 53.
R	Published in release 24D. The following updates are done in this revision: • Minor corrections.

Product documentation

Categories for user documentation from ABB Robotics

The user documentation from ABB Robotics is divided into a number of categories. This listing is based on the type of information in the documents, regardless of whether the products are standard or optional.

Tip

All documents can be found via myABB Business Portal, www.abb.com/myABB.

Product manuals

Manipulators, controllers, DressPack, and most other hardware is delivered with a **Product manual** that generally contains:

- Safety information.
- Installation and commissioning (descriptions of mechanical installation or electrical connections).
- Maintenance (descriptions of all required preventive maintenance procedures including intervals and expected life time of parts).
- Repair (descriptions of all recommended repair procedures including spare parts).
- Calibration.
- Troubleshooting.
- Decommissioning.
- Reference information (safety standards, unit conversions, screw joints, lists of tools).
- Spare parts list with corresponding figures (or references to separate spare parts lists).
- References to circuit diagrams.

Technical reference manuals

The technical reference manuals describe reference information for robotics products, for example lubrication, the RAPID language, and system parameters.

Application manuals

Specific applications (for example software or hardware options) are described in **Application manuals**. An application manual can describe one or several applications.

An application manual generally contains information about:

- The purpose of the application (what it does and when it is useful).
- What is included (for example cables, I/O boards, RAPID instructions, system parameters, software).
- How to install included or required hardware.
- How to use the application.

Continues on next page

- Examples of how to use the application.

Operating manuals

The operating manuals describe hands-on handling of the products. The manuals are aimed at those having first-hand operational contact with the product, that is production cell operators, programmers, and troubleshooters.

8 Motors

Delivery of spare part motors

Spare part motors are delivered with pinion and o-ring.

Motors, type C and D

Note

Motors on axes 4, 5 and 6 can be ordered both as Type C and Type D. Make sure to order the correct one.

WARNING

Motors of Type D are not applicable to Foundry Prime! Therefore Type D can not be used on Foundry Prime robots.

WARNING

Motors of Type D are not compatible with other types and can only be replaced by motors of the same type. Do not mix motors of different types on the robot!
