

6RY1803-1DA04

Functional-Safety Power Interface

Siemens 6RY1803-1DA04 is a Functional Safety Power Interface spare part supplied with terminals and board reference C98043-A7106-L4. It restores the specified control or power-interface function inside the matched Siemens drive assembly.

BRAND	Siemens	FAMILY	Siemens SINAMICS or SIMOVERT drive power-electronics system
PART	6RY1803-1DA04	SYSTEM ROLE	Provides the documented power interface including terminals function

Product Overview

SYSTEM FUNCTION

Siemens 6RY1803-1DA04 is a Functional Safety Power Interface spare part supplied with terminals and board reference C98043-A7106-L4. It restores the specified control or power-interface function inside the matched Siemens drive assembly.

FUNCTION 1

Provides the documented power interface including terminals function

FUNCTION 2

Keeps 6RY1803-1DA04 as the controlled identity

FUNCTION 3

Matches the approved drive hardware position

FUNCTION 4

Supports controlled diagnostic verification

System Components

COMPONENT	DOCUMENTED ROLE
Host / carrier	Siemens SINAMICS or SIMOVERT drive power-electronics system
Primary interface	Provides the documented power interface including terminals function
Engineering context	6RY1803-1DA04 is serviced only in the documented Siemens drive position with its matching host hardware, connectors, cooling and protective-ground arrangement. Commissioning preserves the as-found configuration and verifies identity, connections, diagnostics and the affected drive function.
Commissioning duty	Complete controlled interlock, output and machine-function tests before returning the drive to service.

TECHNICAL NOTE

Before removing 6RY1803-1DA04, record the complete drive identity, hardware version, mating connectors, power interfaces, grounding and configuration. Restore the exact Siemens arrangement, review diagnostics and complete controlled drive and machine tests before release.

ENGINEERING BOUNDARY

Confirm 6RY1803-1DA04, the complete Siemens drive type, hardware revision, power interface including terminals position, connectors and terminals, DC-link isolation, cooling, protective grounding, firmware, parameter set and controlled interlock and functional-test results before commissioning.

Applications and Precautions

Common Applications

6RY1803-1DA04 installed-system service

Restores the documented power interface including terminals position without changing the approved Siemens SINAMICS or SIMOVERT drive power-electronics system architecture.

6RY1803-1DA04 controlled replacement

Uses exact identity and hardware records to prevent a neighboring execution from entering the installation.

6RY1803-1DA04 cabinet refurbishment

Preserves the recorded connector, terminal and protective-ground arrangement during planned maintenance.

6RY1803-1DA04 recommissioning

Provides the product-specific reference for diagnostic review and functional acceptance before release.

Product Precautions

- 1

Confirm the complete 6RY1803-1DA04 marking and installed drive record before work.
- 2

Place the drive, motor and associated process in the approved maintenance state.
- 3

Isolate incoming power and prove the DC link and all stored energy discharged.
- 4

Record every connector, terminal, busbar, cable and protective-earth position before removal.
- 5

Use ESD controls and protect all board and module interfaces from contamination or mechanical load.
- 6

Install only the documented power interface including terminals execution and restore the recorded hardware arrangement.
- 7

Restore the approved firmware, parameters and project configuration, then review all drive diagnostics.
- 8

Complete controlled interlock, output and machine-function tests before returning the drive to service.

IMPORTANT NOTICE

Confirm 6RY1803-1DA04, the complete Siemens drive type, hardware revision, power interface including terminals position, connectors and terminals, DC-link isolation, cooling, protective grounding, firmware, parameter set and controlled interlock and functional-test results before commissioning.

ACCEPTANCE CHECK	REQUIRED EVIDENCE
Identity	6RY1803-1DA04
Configuration	Restore the approved firmware, parameters and project configuration, then review all drive diagnostics.
Functional release	Complete controlled interlock, output and machine-function tests before returning the drive to service.

Engineer FAQ

Q1 Which official identity detail distinguishes 6RY1803-1DA04 during receiving inspection?

For 6RY1803-1DA04, the official source identifies article number as 6RY1803-1DA04. Confirm the same value in the installed record before work.

Q3 How does the published board reference affect selection of 6RY1803-1DA04?

For 6RY1803-1DA04, the official source identifies board reference as C98043-A7106-L4. Confirm the same value in the installed record before work.

Q5 Where does 6RY1803-1DA04 fit in the approved installed system arrangement?

For 6RY1803-1DA04, the official source identifies installed system as Siemens SINAMICS or SIMOVERT drive power-electronics system. Confirm the same value in the installed record before work.

Q7 Which diagnostic sequence should follow controlled energization of 6RY1803-1DA04?

Restore the approved firmware, parameters and project configuration, then review all drive diagnostics.

Q2 What documented component must be matched before 6RY1803-1DA04 is installed?

For 6RY1803-1DA04, the official source identifies component as Power Interface including terminals. Confirm the same value in the installed record before work.

Q4 Which execution condition must remain unchanged when replacing 6RY1803-1DA04?

For 6RY1803-1DA04, the official source identifies execution as Functional Safety. Confirm the same value in the installed record before work.

Q6 What connection evidence should be retained before disconnecting 6RY1803-1DA04?

Record every connector, terminal, busbar, cable and protective-earth position before removal. Use ESD controls and protect all board and module interfaces from contamination or mechanical load.

Q8 What functional result is required before 6RY1803-1DA04 returns to service?

Complete controlled interlock, output and machine-function tests before returning the drive to service.
