

SC560 3BSE008105R1

Submodule Carrier

ABB SC560 3BSE008105R1 is a communication-module submodule carrier with local CPU for ABB control-system hardware. The SC560 identity is associated with ABB article 3BSE008105R1 and the role “Submodule Carrier incl local CPU.”

BRAND	ABB	ORIGIN	Sweden
MODEL	SC560 3BSE008105R1	PRODUCT	Submodule Carrier
FAMILY	ABB Advant OCS / Advant 800xA	SOURCE	ABB SC560 product record; article 3BSE008105R1; Submodule Carrier incl local CPU

SC560 3BSE008105R1

Product Overview

SYSTEM FUNCTION

ABB SC560 3BSE008105R1 is a communication-module submodule carrier with local CPU for ABB control-system hardware. The SC560 identity is associated with ABB article 3BSE008105R1 and the role "Submodule Carrier incl local CPU."

FUNCTION 1

Submodule carrier

FUNCTION 2

Local CPU integration

FUNCTION 3

Modular communication hardware

FUNCTION 4

Controlled backplane replacement

TECHNICAL NOTE

Before commissioning ABB SC560 3BSE008105R1, verify the carrier marking, installed local CPU arrangement, backplane position and connected submodules. Record the communication-module configuration before returning the system to service.

Technical Data and Acceptance

PARAMETER	VERIFIED VALUE
Product type	Communication Module
Device role	Submodule Carrier
Local CPU	Included with local CPU
ABB article	3BSE008105R1
Designation	SC560

ENGINEERING BOUNDARY

Before commissioning ABB SC560 3BSE008105R1, verify the carrier marking, installed local CPU arrangement, backplane position and connected submodules. Record the communication-module configuration before returning the system to service.

Acceptance Path

1 IDENTITY

SC560 and 3BSE008105R1 recorded

2 HARDWARE

Backplane and local CPU arrangement verified

3 FUNCTION

Communication and system-start test passed

Applications and Engineering FAQ

APPLICATION	ENGINEERING CONTEXT
Modular ABB control cabinets	Provides a carrier position for documented communication submodules.
Local CPU arrangements	Supports a carrier configuration with the specified local CPU role.
Communication submodule integration	Maintains the installed backplane and communication-module arrangement.
Replacement and commissioning	Enables controlled replacement after recording the original configuration.

Model-Specific FAQ - Part 1

QUESTION	ANSWER
What is ABB SC560 3BSE008105R1?	A communication-module submodule carrier with local CPU for ABB control-system hardware.
What is the ABB article number?	3BSE008105R1.
What role does SC560 perform?	It provides a submodule carrier position in the documented communication hardware arrangement.
What must be isolated before replacement?	Cabinet power and the associated backplane.

FAQ, Related Products and Source

QUESTION	ANSWER
What should be recorded first?	Carrier marking, local CPU arrangement, backplane position and submodule wiring.
How is the replacement accepted?	The communication path and system start are checked under controlled conditions.
Can the carrier be commissioned without configuration records?	No; the installed communication-module arrangement should be recorded first.
What is the release test?	A controlled communication and system-start test with no unexplained fault.
