

6ES5941-7UB11

S5 CPU Module

COMPLETE PRODUCT INFORMATION

It executes the STEP 5 control program for an S5-115U system and provides two kilobytes of internal user RAM.

- Executes the S5-115U control program
- Controls the S5 backplane bus
- Provides two kilobytes of internal RAM
- Supports documented PID control functions

VERIFIED IDENTITY

Article number	6ES5941-7UB11	Processor designation	CPU 941
Controller system	SIMATIC S5-115U	Internal user memory	2 KB RAM
Program execution	STEP 5 control program	Optional memory submodule	Up to 32 KB documented for the CPU family

Official source: Siemens SIMATIC S5-115U Programmable Controller Manual and exact Industry Mall article record
Publication: EWA 4NEB 811 6130-02b; 6ES5941-7UB11

TECHNICAL DATA

Article number	6ES5941-7UB11	Processor designation	CPU 941
Controller system	SIMATIC S5-115U	Internal user memory	2 KB RAM
Program execution	STEP 5 control program	Optional memory submodule	Up to 32 KB documented for the CPU family
Integrated functions	Interrupt and substitution operations; S5 bus control	PID support	Integral PID algorithms in CPU 941 to CPU 944 operating systems
PID sampling reference	From 100 ms	PID loop reference	Up to eight loops
Lifecycle	Discontinued; deleted without replacement	Lifecycle effective date	1 October 2022
Siemens catalog identifier	ST9-E5		

APPLICATIONS & SYSTEM COMPONENTS

Legacy machine sequence control	Executes established machine logic on the S5 backplane.
S5-115U process automation	Coordinates analog and digital modules in legacy process equipment.
STEP 5 controller restoration	Restores an approved STEP 5 application and retentive data set.
CPU 941 replacement	Renews the exact two-kilobyte CPU position.

- SIMATIC S5-115U rack and power supply
- S5 input and output modules
- approved STEP 5 project and memory arrangement
- backup battery and retentive-data plan

PRECAUTIONS & ENGINEER FAQ

PRODUCT PRECAUTIONS

- Verify the complete 6ES5941-7UB11 marking and the assigned SIMATIC S5-115U programmable controller position before work.
- Isolate all applicable power and step 5 program execution and s5 backplane control field energy before disconnection.
- Use ESD controls and protect keyed interfaces, exposed contacts and electronic assemblies.
- Restore power in a controlled sequence and review module, rack and host diagnostics.
- Place the connected legacy machine sequence control process in the approved maintenance state.
- Record every connector, conductor, address, jumper and project identity before removal.
- Confirm the installed SIMATIC S5-115U rack and power supply and approved STEP 5 project and memory arrangement against the approved system record.
- Prove the intended s5-115u process automation function and retain the final acceptance result.

ENGINEER FAQ — PART 1

1	What controller role does Siemens 6ES5941-7UB11 perform?	It is the CPU 941 central processor for a SIMATIC S5-115U programmable controller.
2	How much internal user memory is available in 6ES5941-7UB11?	The exact article is documented with 2 KB of internal RAM for the control program.
3	What program must be secured before replacing 6ES5941-7UB11?	Back up the approved STEP 5 program, data blocks, retentive flags, timers, counters and the as-found operating mode.

6ES5941-7UB11 | PAGE 3

4	How is retained data protected around a 6ES5941-7UB11 exchange?	Follow the S5-115U power-supply and battery procedure so program memory and retentive data are not unintentionally lost.

ENGINEER FAQ & RELATED PRODUCTS

1	Which backplane duties are handled by 6ES5941-7UB11?	The CPU executes the control program, manages interrupts and substitution operations, and controls data exchange on the S5 bus.
2	Can 6ES5941-7UB11 be used for PID control?	The S5-115U manual documents integral PID algorithms for CPU 941 to CPU 944, with sampling from 100 ms and up to eight loops when engineered.
3	Why is a different S5 CPU not an automatic substitute for 6ES5941-7UB11?	Memory capacity, execution behavior, interfaces and project compatibility differ; compare the complete hardware and software configuration.
4	What acceptance sequence should follow a 6ES5941-7UB11 installation?	Restore the approved project, confirm CPU and battery diagnostics, verify all I/O, and run the machine sequence under controlled conditions.
