

APTER POWER

330180-X1-05 MOD:143416-07

Proximitior Sensor

It is a modified 330180 Proximitior Sensor carrying the exact MOD:143416-07 service identity.

COMPLETE PRODUCT SNAPSHOT

MANUFACTURER	Bently Nevada
FAMILY	3300 XL 8 mm proximity transducer system
MODEL	330180-X1-05 MOD:143416-07
DOCUMENT	141194 Rev. AN

330180-X1-05 MOD:143416-07

Exact-model technical record

Complete model	330180-X1-05 MOD:143416-07
Manufacturer	Bently Nevada
Product family	3300 XL 8 mm proximity transducer system
Base assembly	330180 Proximitor Sensor
Option identity	X1-05
Modification identity	143416-07
Power without barriers	-17.5 to -26 V DC
Power with barriers	-23 to -26 V DC

Maximum current	12 mA
Output resistance	50 ohm
Maximum field wire	305 m (1,000 ft)
Matched system	3300 XL 8 mm probe and extension cable
System linear range	2.0 mm (80 mils)
Scale factor	7.87 V/mm (200 mV/mil)
Frequency response	0 to 10 kHz
Catalog boundary	MOD and nonstandard suffix require exact installed-record confirmation

System role and applications

Shaft vibration loop

Conditions a matched eddy-current probe signal for machinery monitoring.

Position measurement

Supports non-contacting position measurement in an engineered installation.

Buffered diagnostics

Provides the transducer signal used for gap and waveform checks.

Modified sensor renewal

Preserves the exact MOD:143416-07 service identity during replacement.

ENGINEERING BOUNDARY

Do not decode or substitute the X1-05 / MOD:143416-07 identity from a standard catalog entry. Verify the complete nameplate, matched probe/cable length, power, polarity and monitor configuration.

Model-specific engineering questions

Q1. Why must MOD:143416-07 remain attached to Bently Nevada 330180-X1-05?

The modification number is part of the service identity and cannot be replaced by a standard 330180 catalog assumption.

Q2. Which sensing components feed Bently Nevada 330180-X1-05 MOD:143416-07?

Use a matched 3300 XL 8 mm probe and extension cable whose combined length agrees with the installed loop record.

Q3. How does a barrier change the supply requirement for Bently Nevada 330180-X1-05 MOD:143416-07?

Without barriers the supply range is -17.5 to -26 Vdc; with barriers maintain -23 to -26 Vdc, with sensor current no higher than 12 mA.

Q4. What input loading is compatible with the 50-ohm output of Bently Nevada 330180-X1-05 MOD:143416-07?

The monitor and test equipment must accept the sensor's 50 ohm output without loading or distorting the conditioned signal.

Acceptance reference and related products

Q5. How far may the monitor be wired from Bently Nevada 330180-X1-05 MOD:143416-07?

Field wiring may extend to 305 m (1,000 ft) when the required cable construction, shielding, and routing practices are maintained.

Q6. Which displacement slope should the X1-05 sensor deliver?

With the proper 8 mm transducer chain, expect 7.87 V/mm (200 mV/mil) through the specified linear region.
