RS01 RS 01

Product Overview

System function

ABB RS01, also marked RS 01, is a legacy Hartmann & Braun Contronic module. Catalog evidence identifies the exact RS01 module with board code 0776039F.

Contronic integration

Matches the documented RS01 module position in the associated control system.

Exact board code

Uses 0776039F to distinguish the requested board.

Dual marking form

Recognizes RS01 and RS 01 while preserving the complete part identity.

Legacy service role

Supports controlled maintenance of installed H&B; Contronic hardware.

Technical note

Confirm RS01, RS 01 and 0776039F on the physical board. Record the rack position and all connections before controlled replacement.

Applications and Engineering FAQ

APPLICATION	ENGINEERING CONTEXT
Contronic rack maintenance	Maintains the exact RS01 position in an installed H&B; control rack.
Exact-board replacement	Uses the RS01 and 0776039F identity for controlled exchange.
Legacy system preservation	Retains the documented connector and circuit relationships.
Spare identification	Matches the catalog and physical board markings before selection.

Model-Specific FAQ - Part 1

QUESTION	ANSWER
What is ABB RS01 RS 01?	It is a legacy ABB/Hartmann & Braun Contronic module.
Which board code identifies ABB RS01 RS 01?	Catalog evidence identifies board code 0776039F.

FAQ, Related Products and Sources

QUESTION	ANSWER
Which family uses ABB RS01 RS 01?	The model is associated with H&B; Contronic and Contronic 3 systems.
Are RS01 and RS 01 the same marking form?	They are catalog aliases, but the full board code and installed revision must still be confirmed.
Can ABB RS01 RS 01 be replaced by a nearby RS model?	No. Replacement requires an exact identity and documented compatibility review.
What must be recorded before removing ABB RS01 RS 01?	Record 0776039F, the rack, slot, connectors and affected circuits.
Can ABB RS01 RS 01 be replaced while energized?	No. Use the approved isolation and maintenance procedure.
What confirms ABB RS01 RS 01 commissioning?	The identity and connections must match the record and affected functions must pass controlled tests.
