KJ4010X1-BF1 12P0831X062

DeltaV Left Carrier Extender

This reference defines the engineering boundary of KJ4010X1-BF1 12P0831X062 and separates documented product resources from site-specific assignments. It supports exact-model review, controlled replacement and evidence-based handover.

System position

Exact identity	System family	Functional role	Release basis
KJ4010X1-BF1 12P0831X062	DeltaV M-series Horizontal Carriers	Carrier Extender	Recorded test and diagnostics

Control the identity boundary

Treat the complete KJ4010X1-BF1 12P0831X062 marking, the DeltaV Left Carrier Extender designation and the receiving DeltaV M-series Horizontal Carriers position as one controlled identity.

IDENTITY / RESOURCE	DOCUMENTED VALUE
Exact model	KJ4010X1-BF1 12P0831X062
Hardware role	Left carrier extender
Platform	DeltaV M-series
Subsystem	Horizontal carrier architecture
Orientation	Left side
Revision identity	12P0831X062

Technical evidence record: Emerson-authored DeltaV installation and horizontal-carrier documentation

KJ4010X1-BF1 12P0831X062

Interfaces and integration

Trace the installed signal path

Integration review proceeds from the receiving position through mechanical, electrical and configuration interfaces before any replacement decision is released.

Exact model	KJ4010X1-BF1 12P0831X062
Hardware role	Left carrier extender
Platform	DeltaV M-series

Define the receiving position

The host review links the physical slot, companion hardware and retained engineering revision to the offered item.

Host	DeltaV M-series Horizontal Carriers
Primary role	left-side extension of the documented horizontal
Acceptance	Recorded diagnostic response

Interface control matrix

CONTROL BAND	VERIFICATION RECORD
Identity	Model, designation and complete label
Mechanical	Position, seating and retention
Electrical	Loop supply and field conductors
Processing	Range, limits and correction
Supervision	Supply, range and wire-break states
Release	Controlled test with retained result

Configuration ownership

Keep assigned channel values under the approved project record.

Acceptance ownership

Name the retained result that authorizes handover of the measurement path.

KJ4010X1-BF1 12P0831X062

Technical resource bands

Only capabilities tied to the exact execution appear here; operating assignments remain configuration-controlled.

PARAMETER	VALUE
Exact model	KJ4010X1-BF1 12P0831X062
Hardware role	Left carrier extender
Platform	DeltaV M-series
Subsystem	Horizontal carrier architecture
Orientation	Left side

PARAMETER	VALUE
Revision identity	12P0831X062
Installation basis	Match recorded adjacent carrier and cable direction
Service boundary	De-energize before changing carrier
Acceptance	Carrier power, LocalBus continuity and module

Label decision

Accept the stated part number only when the complete installed identity agrees.

Circuit decision

Confirm the recorded field-circuit arrangement before reconnecting any loop.

Processing decision

Restore channel processing from the approved project rather than a neighboring position.

Evidence decision

Use diagnostic observations and a controlled response to support final handover.

Engineering boundary

A similar faceplate or matching channel total does not prove interchangeability. Resolve the host position, connection scheme and controlled revision before use.

KJ4010X1-BF1 12P0831X062

Controls and service logic

Identity control

Preserves the complete KJ4010X1-BF1 12P0831X062 execution.

Host integration

Matches the installed DeltaV M-series Horizontal Carriers position.

Interface control

Retains power, signal, keying and protective connections.

Release control

Uses diagnostics and a functional test to close the work.

Service decision path

STEP	REQUIRED OUTCOME
1. Identify	Resolve label, designation and receiving position
2. Compare	Review circuit type, processing and supervision
3. Restore	Rebuild the recorded connection and configuration state
4. Demonstrate	Retain diagnostic and functional acceptance evidence

KJ4010X1-BF1 12P0831X062

Engineering decisions

What is the documented role of KJ4010X1-BF1 12P0831X062?

It is identified as a deltav left carrier extender used for left-side extension of the documented horizontal carrier row.

Why must the complete KJ4010X1-BF1 12P0831X062 identity be retained?

The full model and suffix distinguish the installed execution from similar-looking revisions and related hardware.

Which value is documented for KJ4010X1-BF1 12P0831X062 hardware role?

The verified product record gives hardware role as Left carrier extender.

How is platform specified for KJ4010X1-BF1 12P0831X062?

The verified product record gives platform as DeltaV M-series.

What does KJ4010X1-BF1 12P0831X062 subsystem?

The verified product record gives subsystem as Horizontal carrier architecture.

Which setting applies to KJ4010X1-BF1 12P0831X062 orientation?

The verified product record gives orientation as Left side.
