Westinghouse 1C31150G01

Installation & Commissioning Guide

Westinghouse 1C31150G01 serves as a pulse accumulator personality module in the Ovation I/O subsystem. It interfaces negative-common count and control input with 1C31147G01 medium-speed or 1C31147G02 high-speed electronics module.

PRODUCT ROLE AND VERIFIED FEATURES

Feature 1

Provides two pulse channels for the documented pulse accumulator personality module function.

Feature 2

Handles negative-common count and control input through the specified Ovation I/O subsystem.

Feature 3

Works with 1C31147G01 medium-speed or 1C31147G02 high-speed electronics module.

Feature 4

The field interface supports the documented negative-common pulse-input arrangements for the paired electronics module.

VERIFIED DATA SNAPSHOT

Subsystem	Pulse accumulator
Channels	2
Medium-speed pairing	1C31147G01
High-speed pairing	1C31147G02 for 5 V negative-common input

SYSTEM RELATIONSHIP

Pulse source → **Personality module** → **Accumulator module** → **Ovation controller**

Pre-installation readiness

READINESS GATE

Identity

Compare the complete marking with the approved work order and installed record.

System match

Confirm the receiving channel, mating components and controlled configuration.

Physical condition

Inspect mounting surfaces, connectors, terminals, cable and support hardware.

Work controls

Apply authorized isolation, bypass, access and restoration procedures.

TECHNICAL PROFILE FOR THE WORK

Subsystem

Pulse accumulator

Channels

2

Medium-speed pairing

1C31147G01

High-speed pairing

1C31147G02 for 5 V negative-common input

Input sources

Dry contacts or open-collector transistor drivers

IMPORTANT NOTICE

Resolve every unmatched interface, configuration or receiving-system condition before removal or installation.

SOURCE AND WORK CONTROLS

Manufacturer source	Emerson Process Management, Ovation I/O Reference Manual R3-1150 Rev 3, Section 17, February 2003.
Evidence boundary	Technical statements are limited to the identified product or applicable manufacturer family.
Selection control	Use the complete ordering string and verify the installed system before purchase or installation.

Installation sequence

CONTROLLED WORK STEPS

01	Match the complete 1C31150G01 marking to the work order and installed position before removal.
02	Confirm 1C31147G01 medium-speed or 1C31147G02 high-speed electronics module before making or breaking any field connection.
03	Keep the assigned negative-common count and control input within the documented subsystem and range.
04	Record terminal designations, polarity, common and shield treatment before disconnecting conductors.
05	Inspect module seating, connector keying, terminal condition and strain relief before power is restored.
06	Restore the controlled channel configuration, range selection and alarm or timeout behavior after installation.
07	Check local indicators and controller diagnostics for internal, communication or channel faults during commissioning.
08	Prove the intended response across two pulse channels and record the acceptance result before release.

CONNECTION RECORD

As found	Photograph and label every connection and installed orientation before removal.
Mechanical	Record mounting position, support, clearance and connector engagement.
Electrical	Record polarity, common, shield, channel assignment and cable route.
Configuration	Preserve approved settings, scaling, alarm logic and acceptance limits.
As left	Record the final physical condition and any controlled deviation.

Pulse source → **Personality module** → **Accumulator module** → **Ovation controller**

WORK HOLD POINTS

Before removal	Identity, position, wiring, orientation and controlled settings recorded.
Before connection	Mating interfaces, condition and routing reviewed.
Before power-up	Mechanical work, wiring, shielding and configuration independently checked.
Before release	Static value, dynamic response and protection behavior accepted.

Commissioning and functional proof

COMMISSIONING SEQUENCE

Initial state

Observe status at power-up and check for unexpected fault or alarm indication.

Static value

Verify the expected bias, gap, loop, contact or channel value for the application.

Dynamic response

Apply the approved machine or test stimulus and confirm response and scaling.

Protection path

Verify the configured alarm, relay, data or receiving-system behavior.

APPLICATION-SPECIFIC EVIDENCE

Installed-base maintenance

Restores the documented pulse accumulator personality module position without changing the approved system architecture.

Loop or channel service

Supports verification of negative-common count and control input at the assigned control-system channel.

Planned replacement

Provides an exact-identity replacement path when 1C31147G01 medium-speed or 1C31147G02 high-speed electronics module and the field interface have been confirmed.

Commissioning support

Allows the responsible engineer to prove wiring, configuration, status and response for two pulse channels.

ACCEPTANCE RECORD

Identity	Complete marking and final installed position recorded.
Physical inspection	Mounting, connectors, terminals and routing checked.
Channel status	Expected status and configured measurement confirmed.
Functional test	Required output or protection response demonstrated.
Restoration	Bypasses removed and operating state approved.

COMMISSIONING QUESTIONS

What function does Westinghouse 1C31150G01 perform?	It provides the negative-common field interface for Ovation pulse-accumulator count and control inputs.
How many channels are associated with Westinghouse 1C31150G01?	The documented configuration provides two pulse channels.

Release record and technical references

CLOSEOUT QUESTIONS

Which signal path is used by Westinghouse 1C31150G01?	It is used for negative-common count and control input within the specified subsystem.
Which companion hardware must be checked for Westinghouse 1C31150G01?	Confirm 1C31147G01 medium-speed or 1C31147G02 high-speed electronics module and the project-specific base or terminal arrangement.
What technical values should be verified before installing Westinghouse 1C31150G01?	Verify Pulse accumulator; also confirm 2 and every applicable range or wiring selection.
What connection details should be recorded for Westinghouse 1C31150G01?	Record terminal identifiers, polarity, common, shield termination, connector keying and the assigned channel before disconnection.
Which diagnostics should be reviewed when commissioning Westinghouse 1C31150G01?	Review the applicable power, communication, internal-fault and channel-status indications, then compare the controller status with the expected field condition.
Can a nearby ordering code replace Westinghouse 1C31150G01 without an engineering check?	No. Match the complete identifier, companion hardware, signal range, wiring and controlled project configuration before substitution.

RELATED MODELS FOR INSTALLATION PLANNING

Westinghouse 5X00300G01	Installation-planning reference. Review the complete ordering string before selection.
Foxboro AD908AC FBM202	Installation-planning reference. Compare the required interface and system position.
Westinghouse 1C31223G01	Installation-planning reference. Confirm the execution independently for the intended task.

MANUFACTURER SOURCE AND FINAL CONTROL

Manufacturer source	Emerson Process Management, Ovation I/O Reference Manual R3-1150 Rev 3, Section 17, February 2003.
Evidence boundary	Technical statements are limited to the identified product or applicable manufacturer family.
Selection control	Use the complete ordering string and verify the installed system before purchase or installation.

IMPORTANT NOTICE Release the equipment only after the responsible site authority accepts the recorded result.
