

Siemens

6DD3460-0AC0

SE59 Pulse Sensor Module

Siemens 6DD3460-0AC0 is a SIMADYN D SE59 pulse sensor spare part for a PT10 submodule, providing memory for two pulse-sensing channels.

System position

Exact identity

6DD3460-0AC0

System family

SIMADYN D PT10 submodule hardware

Functional role

Pulse Sensor Module

Release basis

Recorded test and diagnostics

Keep the hardware and configuration identities together

Within a SIMADYN D PT10 assembly, Siemens 6DD3460-0AC0 preserves the SE59 pulse-sensor position and its two pulse-sensing memory paths.

IDENTITY / RESOURCE	DOCUMENTED VALUE
Exact article	6DD3460-0AC0
Product family	SIMADYN D
Product type	SE59 pulse sensor
Host relationship	PT10 submodule
Pulse-sensing capacity	Memory for 2 pulse sensings
Lifecycle	End of product lifecycle

Technical evidence record: Siemens SiePortal exact product record for 6DD3460-0AC0

6DD3460-0AC0

Interfaces and integration

Define the installed role

Within a SIMADYN D PT10 assembly, Siemens 6DD3460-0AC0 preserves the SE59 pulse-sensor position and its two pulse-sensing memory paths.

Exact article	6DD3460-0AC0
Product family	SIMADYN D
Product type	SE59 pulse sensor

Map the host relationship

The complete 6DD3460-0AC0 identity is matched to the host position, companion hardware and retained engineering record before any connection is disturbed.

Host	SIMADYN D PT10 submodule hardware
Primary role	both SE59 pulse-sensing paths
Acceptance	Diagnostics and functional response

Interface control matrix

CONTROL BAND	VERIFICATION RECORD
Identity	Exact model and complete label
Mechanical	Form, seating and retention
Electrical	Power, field wiring and protective earth
Communication	Address, network and companion configuration
Configuration	Switches, parameters, project and revision
Release	Controlled test with retained result

Configuration continuity

Retain the recorded SIMADYN D PT10 submodule hardware position, connected interfaces and

Acceptance evidence

Release 6DD3460-0AC0 only after diagnostics and a controlled functional result are recorded.

Technical resource bands

Only values tied to the complete product identity are listed. Installation-specific settings remain governed by the controlled site record.

PARAMETER	VALUE	PARAMETER	VALUE
Exact article	6DD3460-0AC0	Product class	Custom / order-engineered spare part
Product family	SIMADYN D	Quantity unit	1 piece
Product type	SE59 pulse sensor	Siemens product group	4230
Host relationship	PT10 submodule	Siemens catalog	ST9.DA99T
Pulse-sensing capacity	Memory for 2 pulse sensings	Export classification	ECCN N / AL N
Lifecycle	End of product lifecycle	Acceptance basis	Identity, PT10 relationship and two signal paths

Identity decision

Accept only the complete 6DD3460-0AC0 marking and the recorded hardware execution.

Host decision

Confirm the receiving SIMADYN D PT10 submodule hardware position and every companion component.

Interface decision

Compare mechanical fit, power, field wiring, communication and protective earth.

Release decision

Record diagnostics and a controlled test of both SE59 pulse-sensing paths before handover.

Engineering boundary

Use 6DD3460-0AC0 only after the exact host, installed position, companion parts, protection measures and commissioning record have been matched. Do not borrow ratings from a similar-looking variant.

6DD3460-0AC0

Controls and service logic

PT10 pulse acquisition

Maintains the two-path pulse-sensing position in a matched PT10 assembly.

SIMADYN D maintenance

Supports exact-spare replacement where the retained host and signal map are known.

Legacy drive control

Preserves pulse-sensor hardware in an established SIMADYN D control configuration.

Controlled service recovery

Returns both recorded pulse paths to operation after diagnostic verification.

Service decision path

STEP	REQUIRED OUTCOME
1. Identify	Read 6DD3460-0AC0 and all companion markings
2. Compare	Host, position, connections, settings and revision
3. Install	Restore wiring, shielding, retention and protection
4. Verify	Review diagnostics and execute controlled function test

6DD3460-0AC0

Engineering decisions

What does Siemens 6DD3460-0AC0 identify?

It identifies the SIMADYN D SE59 pulse sensor spare part.

Which host relationship applies to Siemens 6DD3460-0AC0?

It is used with the PT10 submodule.

How many pulse-sensing memories are stated for Siemens 6DD3460-0AC0?

The Siemens description states memory for two pulse sensings.

Why must Siemens 6DD3460-0AC0 be matched by complete article number?

It is a custom or order-engineered lifecycle-ended spare part, so the installed execution controls compatibility.

What should be recorded before removing Siemens 6DD3460-0AC0?

Record the PT10 position, both signal assignments, connectors, adjacent hardware and diagnostic state.

Why must the complete Siemens 6DD3460-0AC0 marking be checked?

The exact article, SE59 identity and PT10 relationship must agree with the installed configuration.
