Foxboro P0904AK

GCIO connection map

P0904AK is the tabletop interface without touchscreen support. The workstation communicates with the primary GCIO, and the optional secondary unit extends the keyboard arrangement.

Dedicated connection paths

Path or device	Connection identity
Workstation to primary GCIO	Use the workstation-specific GCIO cable and retain its original assignment.
GCIO to annunciator keyboard	P0800MW
Primary to secondary GCIO	P0970HV
Annunciator keyboard	P0903CV
Annunciator and numeric keyboard	P0903CW

Two-interface arrangement

A pair of GCIO units serves up to four keyboards. Identify which keyboards attach to the primary and secondary interfaces before tracing a missing operator function. The display and monitor touchscreen use separate connection paths.

Keyboard functions

Keyboard	Operator function
P0903CV	48 annunciator keys
P0903CW	32 annunciator keys plus numeric keypad

Connection planning

Label both ends of each cable with its function and destination. A keyboard lead, workstation lead and inter-interface lead perform different tasks; preserve their assignments rather than selecting a cable only by connector appearance.
