138492-01

Mounting accessory and installation context

Bently Nevada 138492-01 is a replacement panel-mount mounting pad for supported 3300 XL Proximitor sensor installations. It provides the mounting accessory separately from the sensor.

Accessory type	Replacement mounting pad
Mounting arrangement	Panel mount
Product family	3300 XL Proximitor sensor accessories
Related DIN-mount pad	138493-01 (different mounting arrangement)

Application context

Keeping the sensor mounting arrangement consistent simplifies cabinet maintenance. Bently Nevada 138492-01 supports replacement of the panel-mount pad while the Proximitor sensor and its measuring chain remain separately identified.

Before exchanging a pad, compare the installed sensor housing and attachment arrangement with the replacement. Maintain service access to the sensor terminals and identification markings. A mounting-pad replacement does not determine probe range, signal sensitivity or monitor settings. Check those requirements against the actual sensor, probe and extension cable used in the channel.

Before selecting the replacement

Keep the pad reference separate from the sensor order code. Compare the actual mounting interface, housing and attachment method. A spare pad does not change the sensor calibration or the connected monitoring channel.

138492-01

Supply and purchasing review

Is 138492-01 an electronic Proximitor sensor?

No. It is a replacement panel-mount mounting pad. A Proximitor sensor, probe and extension cable are separate components; their electrical ratings do not describe this mounting accessory.

Can 138492-01 replace the DIN-mount pad in an existing cabinet?

The panel-mount pad and the 138493-01 DIN-mount pad serve different mounting arrangements. Confirm the installed sensor housing and cabinet attachment before choosing either accessory.

What should I compare before ordering 138492-01?

Compare the existing pad, sensor housing, attachment points and cabinet mounting arrangement. Send clear photos of those interfaces so the offer can identify the required mechanical accessory without assuming fit from the system name alone.

Does purchasing 138492-01 include a Proximitor sensor or mounting screws?

Supply scope is confirmed in quotation. Have the pad quantity, any required fasteners, the sensor if separately required, and accompanying documents itemized. Mention of compatible equipment does not mean that equipment is included.

Can I see the offered 138492-01 before placing an order?

Request current photos of both sides of the pad, attachment features and available part or package markings. The offered condition is New, original product; confirm the actual supplied item and packaging in the quotation.

How are quantity and dispatch timing agreed for 138492-01?

Provide the required quantity, destination and required date. Confirm available quantity, the dispatch date and the event that starts the agreed lead time in writing; the shipping-service description is not an inventory commitment.

Which records can be supplied with 138492-01?

State whether you need an invoice, packing list, origin record or inspection evidence before ordering. Availability and inclusion of each document must be confirmed for the offered pad; a manufacturer certificate is not automatically included.

What warranty terms should be confirmed for 138492-01?

Agree the warranty period, coverage, exclusions and claim procedure for the mounting pad in the quotation. Clarify how damage during fitting or a mismatch with the installed housing is handled before accepting the offer.
