6ES7135-0HF01-0XB0

01 / Identity and preparation

ET 200B Analog Output

Siemens 6ES7135-0HF01-0XB0 is an ET 200B-4AO analog-output station. It converts configured PROFIBUS DP output values into four analog field signals for compatible process devices. The PLC program, measurement range and output wiring determine the role of each channel.

System position

Pre-work checks

Exact marking	Confirm the complete 6ES7135-0HF01-0XB0 label, revision and physical execution.
Host configuration	Check the intended SIMATIC ET 200B host, connections and fitted accessories.
Configuration record	Retain the installed parameters, addressing and wiring information for 6ES7135-0HF01-0XB0.
Functional release	Verify affected et 200b analog output functions and diagnostics after installation.

Match the complete unit

Check the full 6ES7135-0HF01-0XB0 marking and any hardware revision against the installation record.

02 / Verification and handover

Isolate the installation

Follow the approved SIMATIC ET 200B isolation and stored-energy procedure before handling the unit.

Preserve the connection record

Label and photograph the et 200b analog output connections, terminations and mounting before removal.

Restore the configuration

Retain the approved SIMATIC ET 200B address, range, software or calibration settings that apply to the installed unit.

Protect the hardware

Use suitable electrostatic-discharge and mechanical protection while handling connectors, boards and retaining parts.

Verify the affected functions

After fitting 6ES7135-0HF01-0XB0, check diagnostics and the relevant I/O or process response under the site acceptance plan.

Accept the installed result

Verify affected et 200b analog output functions and diagnostics after installation.

Application boundary

The characteristics above describe the identified SIMATIC ET 200B execution of 6ES7135-0HF01-0XB0. Optional functions, connected devices and installed revisions must be checked against the complete marking and approved project configuration.
