VV01

Complete Product Information | system use and selection

The published role of VV01 is computing-unit protection within an applicable Contronic 3 arrangement. Its functional boundary is set by the installed cabinet, neighboring cards and project design.

Application context

Contronic 3 computing-unit protection	System integration
Protection role for computing units in a Contronic 3 cabinet. Verify the host cabinet design before use.	Check the adjacent modules, rack connection and signal path in the as-built drawings.

Selection considerations

Identify the exact installed module, rack position and adjacent cards. A same-series part is not an approved substitute solely because it fits mechanically.

Engineering question

Which monitored or controlled signal is assigned to this slot in the site drawing, and how will its correct operation be demonstrated after replacement?

Source boundary

The material-list wording establishes the functional name only. Electrical ratings, terminal assignments and approved interchangeability require matching original manufacturer data or the installed project record.
