CI626A 3BSE005023R1

Advant Bus Administrator Board

A model-specific manufacturer data register. It records verified identifiers and ratings while leaving installation procedure and full page narrative to the two separate product documents.

Verified manufacturer data register

Board class	Bus administrator board
ABB article number	3BSE005023R1
Type designation	CI626A
System platform	ABB Advant S800 I/O installed base
Product type	Advant Bus Administrator Board
Complete product reference	CI626A 3BSE005023R1

Evidence classification

Exact-item fact	Applies when the complete marking on the offered unit agrees with this reference.
Family or platform fact	Describes the documented system relationship and does not authorize adjacent-model substitution.
Installation-dependent fact	Must be confirmed from the machine drawing, cabinet record and connected hardware.
User-confirmed logistics	Kept on the public summary and intentionally excluded from this technical document.

Article-number reading rule

Read every letter, digit, hyphen, slash and revision suffix from the physical ABB label. A shortened designation is useful for recognition, but the complete article identity controls the technical match.

Technical identity worksheet

Label photograph	Front and rear label images retained with readable article and revision fields
Literal transcription	CI626A 3BSE005023R1 / observed revision: _____
Installed position	Cabinet, rack, slot or panel location: _____
Mating hardware	Connector, terminal, backplane or companion-board identity: _____
Drawing reference	Approved drawing and revision: _____
Difference log	None / describe every marking or interface difference before approval

Remaining verified technical fields

Replacement basis	Complete marking and installed-system evidence
Commissioning basis	Bus diagnostics and representative I/O
As-found evidence	Slot, adjacent boards and connector map
Replacement basis	Type, article, revision and rack execution
Revision boundary	All hardware and firmware markings
Configuration boundary	Controller database and I/O assignments
Bus boundary	Installed I/O bus and backplane
Installation format	Rack-mounted control board
System context	Advant S800 I/O installed base

Reference-use matrix

Before quotation	Compare the complete reference and request clear current-unit photographs.
Before removal	Capture installed position, companion hardware and connector or terminal identity.
Before energization	Resolve every article, interface and system-drawing difference.
Before handover	Retain the measured result and responsible approval for the restored function.
Source record	ABB installed-base CI626A / 3BSE005023R1 hardware identification
